Abstract not available for WO9209614

Abstract of corresponding document: **EP0559896**

A 6-O-methylerythromycin A derivative represented by general formula (I) and pharmaceutically acceptable salts thereof, having a potent antibacterial activity against gram-negative bacteria and a more potent activity against gram-positive bacteria than that of known compounds. In the said formula, R<1> and R<2> represent each hydrogen or C1 to C3 alkyl, and A represents nitrogen or N -> O. <CHEM>
